

DICTATOR type 1400

for fixing to doors on the same side as the door stop.

DICTATOR door checks noiselessly control the closing of doors. The door check will ensure, that the door will be held firmly closed and will not slam when shut.

The DICTATOR type 1400 door check has been designed for those situations, where the placing of a hook on the door frame, is not acceptable. The door check type 1400 is mounted on the door, on the same side of the door as the door stop. If required, the door check type 1400 can be mounted horizontally as well as vertically.

The specially designed cylinder assembly of the door check type 1400, will provide a similar closing force to the DICTATOR 1000/1600, assuming the DICTATOR 1000/1600 is mounted approximately 40 cm. from the closing side of the door.

DOOR IN OPENING POSITION

DOOR BEING CLOSED BY DOOR CHECK

DOOR IS CLOSED
